# HIMESH KUMAR

## LEAD FULL STACK ENGINEER

Singapore | +65-81591831 | askhimesh1@gmail.com | github.com/himesh-dev | linkedin.com/in/himesh-kumar

## PROFESSIONAL SUMMARY

Lead Full Stack Engineer with 8 years of experience building distributed systems, scalable architectures, and metadata-driven UI platforms at companies like TikTok and PayPal. Proven expertise in engineering micro-frontends with Module Federation, developing full-stack dynamic platforms, and designing custom Node.js/Python backend automation pipelines. Adept at leveraging Agentic AI workflows, resolving complex rendering and data orchestration bottlenecks (SSR, CSR, BFF optimizations), and establishing rigorous CI/CD release governance for high-traffic, multi-regional enterprise applications.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages:** | JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3 |
| **Architecture:** | Distributed Systems, Backend-for-Frontend (BFF), Micro-Frontends, Server-Driven UI |
| **Backend & Cloud:** | Node.js, PostgreSQL, Firebase, REST, GraphQL, GCP, AWS |
| **Frontend:** | React, Next.js, Redux, Zustand, WebSockets, SEO, Module Federation |
| **AI & GenAI:** | LLMs (Claude, GPT), RAG, Agentic AI Development, AI Workflow Automation |
| **DevOps & Tools:** | Monorepos (Nx, pnpm, EdenX), GitLab, Playwright, Jest, Storybook, Figma |

## PROFESSIONAL EXPERIENCE

### Senior Full Stack Engineer, E-commerce (Pearl SEA)

May 2023 - Present

*TikTok Pte Ltd, Singapore*

- **Config-Driven UI & Component Architecture:** Own the SEA Business Component Library, architecting and developing the full-stack metadata-driven platform—including its backend services—where business metrics dynamically determine component rendering, improving cross-team developer efficiency by 60-70%.
- **Platform Architecture (Micro-Frontends):** Architected the SEA e-commerce platform from the ground up using micro-frontends and Module Federation. Engineered isolated regional API layers and data fetching strategies, boosting regional deployment velocity by 50%.
- **Figma-to-Code Automation:** Architected a Figma-to-Canvas web extension and custom backend pipeline generating Fabric.js code. Cut turnaround from 24+ hours to under a minute, drastically scaling multi-lingual template generation from 20 to over 500+ templates for peak sales events.
- **Monorepo & CI/CD Infrastructure:** Maintained monorepo infrastructure using internal CLI tooling (EdenX, Emo) alongside Nx/pnpm. Automated CI/CD pipelines via GitLab and proprietary platforms, catching regressions with Playwright and Jest.
- **Engineering Leadership (Tokopedia):** Standardized the technical architecture for the Tokopedia acquisition, mentoring engineers and establishing robust full-stack system standards through code reviews to ensure a zero-downtime regional launch.

### Software Engineer 2
May 2021 - Apr 2023

*PayPal India Pvt Ltd, Bangalore, India*

- **Working Capital Expansion:** Led the frontend architecture for the regional expansion of PayPal Working Capital, collaborating with backend teams on data contracts; earned a Spot Award for end-to-end delivery.
- **BFF Architecture & Performance:** Contributed to the Node.js Backend-for-Frontend (BFF) layer. Identified a critical client-side rendering bottleneck and shifted A/B testing logic to the BFF layer, eliminating redundant client-server roundtrips and preventing UI flicker for localized content.
- **Frontend Migration:** Defined the roadmap for migrating the internal "Osprey" tool from Angular to React, increasing developer productivity by 30%.

### Software Engineer, Frontend
Feb 2021 - Apr 2021

*OkCredit, Bengaluru, India*

- **Payment Platform Rollout:** Drove the frontend production rollout of a secure merchant payment platform, integrating robust REST APIs to process 150,000+ daily transactions with 99.9% reliability for an established user base.
- **Network Resilience & Performance:** Optimized core checkout flows for high-latency (2G/3G) networks by implementing Server-Side Rendering (SSR), reducing First Contentful Paint (FCP) by 1.8 seconds and boosting successful checkout conversions by 12%.

### Software Development Engineer 1
May 2020 - Jan 2021

*Pocket Aces Pictures, Bangalore, India*

- **Frontend Architecture & Performance:** Engineered the viewer dashboard using **Next.js (SSR)** and the streamer dashboard using **React (CSR)**. Optimized the platform via lazy loading, bundle splitting, and migrating state from Context API to Redux to eliminate re-renders and improve Time to Interactive (TTI).
- **Video Streaming & Real-Time Chat:** Integrated high-performance video streaming using HLS and DASH protocols, and implemented a real-time, interactive chat system using WebSockets.
- **UI/UX Systems:** Revamped the UI architecture by introducing design tokens and a theming system. Built a custom 3D carousel from scratch and optimized the image upload pipeline to preserve high-resolution thumbnails.
- **SEO Automation & Payments:** Built an SEO-optimized link-sharing application using **Gatsby** to generate dynamic Open Graph (OG) and Twitter meta tags, functioning as a fast redirection gateway to the viewer dashboard. Integrated secure backend payment workflows.

### Frontend Developer
Jan 2020 - Apr 2020

*AWOK Online Service, Bangalore, India*

- Developed the vendor onboarding flow using React and TypeScript, ensuring strict adherence to API contracts negotiated with backend teams.

### Software Engineer (Frontend & Mobile)
Oct 2018 - Jan 2020

*Codeyug Web Services, New Delhi, India*

- **Diagnostic Platform:** Architected and deployed the "PedNeuroAiims" mobile application from the ground up, utilizing React Native for the client and building secure REST APIs backed by a PostgreSQL database deployed on GCP.
- **Real-Time Systems:** Engineered the "AssessPrep" invigilation platform, integrating Firebase to build real-time data synchronization pipelines that securely managed live assessment states.

## EDUCATION

### B.Tech, Electronics and Communication Engineering
2014 - 2018

*Techno India, Kolkata, India*
